Intermountain Health Care	20,000+
State of Utah	20,000+
Brigham Young University	15,000 -- 19,000

We Must Train As We Fight

Our troops need to train in settings similar to the real combat environments they will find themselves in. This ensures that when called upon, their fighting skills are second nature.

Training on the Colorado River

Crossing the Saddam Canal, Iraq

Maintaining A Natural Environment Is Critical

Our fighting men and women must train in realistic, natural environments. Our commitment to healthy, well-managed natural resources will provide realistic training today and into the future.

Linking DoD And The State

DoD's Regional Environmental Coordinators focus on working cooperatively with state rule-writers and legislators to help maintain realistic training environments. This proactive approach provides solutions that help ensure military readiness.

Sustaining Readiness In Partnership With States

DoD IN UTAH

Hill Air Force Base

Hill is home to many operational and support missions. It provides worldwide engineering and logistics management and sustainment for many military aircraft, munitions and fleet of intercontinental ballistic missiles. This includes the F-16 Fighting Falcon, A-10 Thunderbolt II, and Minuteman III intercontinental ballistic missile. The base performs depot maintenance of the F-16, A-10 and C-130 Hercules aircraft. The facility also supports the Utah Test and Training Range.

Utah Air National Guard Base

The Utah Air National Guard operates its base in Salt Lake City, sharing runway facilities with the Salt Lake City International Airport. Its primary mission is refueling for tactical and transport aircraft. It also provides other services, including range control, air traffic control, and intelligence. Utah Air National Guard units have played a significant role in international conflicts worldwide.

Camp Williams

Camp Williams is a National Guard Training Site operated by the Utah Army National Guard. Camp Williams offers a wide variety of training opportunities to Soldiers. It consists of 28,000 acres of training areas and has a billeting capacity of 2,800 troops. Training facilities include small arms weapons firing ranges, artillery firing points and maneuver areas. Specialized winter, desert, mountain, and amphibious training are also available. In addition to Utah Guard units, many regular Army, Army Reserve, Marine Corps and Air Force units use the facilities, both at Camp Williams and at the licensed facilities at Dugway Proving Ground. Camp Williams facilities are also used by the FBI, law enforcement agencies from across the state, and other state agencies for training and leadership conferences.

Dugway Proving Ground

Dugway Proving Ground covers 798,214 acres: an area approximately the size of Rhode Island. It is the Army's largest land mass facility, and is the Defense Department's leader in chemical and biological defensive testing, environmental characterization, and remediation technology testing. Such tests evaluate the reliability and survivability of all types of military equipment in a chemical or biological environment. Dugway also tests battlefield smokes and obscurants. Dugway sits under protected airspace known as the Utah Test and Training Range, controlled by the U.S. Air Force. NASA has also used the combined air/land space for critical recovery operations of its Genesis and Stardust Mission Craft.

Utah Test And Training Range

The Utah Test and Training Range (UTTR) is a vast military area in northern Utah, the nation's largest combined restricted land and closed "special use" airspace area. The UTTR provides the largest overland safety footprint available in the Department of Defense (DoD) for aircrew training and weapons testing. It consists of over 19,000 square miles of restricted airspace with 2,675 miles of ground space. On the ground, numerous target areas, radar and video facilities support over 22,000 training sorties and 1,000 test sorties annually. Missions are coordinated through Hill AFB.

Tooele Army Depot

Tooele Army Depot specializes in ammunition logistics and the engineering of ammunition and ammunition related equipment. As a major power projection platform for the United States Joint Services, the Depot issues, receives stores, maintains, demilitarizes and tests ammunition. Additionally, it develops, fabricates and fields ammunition related equipment. Their equipment and services are used worldwide.

Deseret Chemical Depot

The facility has safely stored about 45 percent of the nation's chemical weapons stockpile, and has been working toward safe destruction of these materials since 1996. The facility is one of eight such storage and demilitarization facilities nationwide.
