**About the MATOC**

The Multiple Award Task Order Contract (MATOC) is a contract vehicle that establishes a pool of qualified firms/contractors for four renewable energy technologies to compete for individual task order contracts.

The U.S. Army Office of Energy Initiatives (formerly the U.S. Army Energy Initiatives Task Force or EITF)* and the U.S. Army Corps of Engineers, Engineering and Support Center, Huntsville, developed the $7 billion MATOC primarily for Power Purchase Agreements involving renewable energy projects greater than 10 megawatts.

These contracts will support the Army’s achievement of its congressionally mandated energy goal of 25 percent production of energy from renewable sources by 2025, and improving installation energy security and sustainability.

The MATOC involves third-party financed renewable energy acquisitions and involves no Army capital or Military Construction appropriation. The Army only purchases the power from contractors who own, operate or maintain the generating assets. The MATOC’s total estimated value of $7 billion refers to the total dollar value of energy available for purchase under all Power Purchase Agreements (PPA) task orders for their entire term (up to 30 years).

As renewable energy opportunities at Army installations are assessed and validated by the Office of Energy Initiatives, Huntsville Center will issue a competitive task order RFP to the pre-qualified MATOC companies for the specific technologies. Task orders will specify the type and amount of energy to be supplied to the Army installation or other federal user as well as other pertinent information for the developer to prepare a response that meets the government’s requirements.
